

TOSCA^{MP}

TOSCA-MP Field trial day

June 4, 2013, 10:00 – 16:30

Registration free

Venue:

European Broadcasting Union

L' Ancienne Route 17A

CH-1718 Grand-Sacconex, Geneva, Switzerland

INVITATION & AGENDA

The partners of the TOSCA-MP project cordially invite you to the TOSCA-MP field trial day.

The TOSCA-MP project is a European Commission's FP7 Research Project, which aims to develop **user-centric content annotation and search tools** for professionals in networked media production and archiving (television, radio, online), addressing their specific use cases and workflow requirements. Among others, the project investigates scalable and distributed content processing methods for performing automatic information extraction, semantic enrichment and search. More information on the project, public deliverables and a list of publications can be found on the website: <http://tosca-mp.eu>.

During this field trial day, you will be able to test and evaluate software components that have been created in the run of the project as well as give your opinion and feedback about the developed scenarios. Your feedback will be very valuable information for the consortium to further improve the TOSCA-MP tools and services in a future iteration. This is an overview of the tools available for testing:

The **control & config user interface** serves as a central hub for monitoring the status of content repositories and invoking workflows for automatic information extraction.

The **user interface for result verification and assessment** visualizes results of a range of automatic **video quality analysis** algorithms. The tool provides efficient means for navigating the analysis results, and verifying and correcting detected defects, as well as adding further annotations.

An **exploratory-based search user interface** that supports different visual functionalities for query refinement and enhancement. The tool relies on Semantic Web technologies and combines content-related features and semantic descriptors to improve the accuracy and recall of the search results. It also allows search and filtering based on automatic annotations.

Registration for the event is **free** and can be done by sending an e-mail message containing your name and affiliation to tosca-mp-office@joanneum.at.

The event is planned in conjunction with the EBU Metadata Developers Network (MDN) Workshop, taking place on June 5th and 6th at EBU Headquarters in Geneva. More information on this seminar and a link for registration is available on the website: <http://tech.ebu.ch/MDN2013>.

Time	Topic / Breakout (parallel) sessions	
09:30	<i>Arrival & coffee</i>	
10:00	General introduction A general overview of the TOSCA-MP project and its main results until now will be presented	
10:45	Scenario's and breakdown analysis The scenario's created for the TOSCA-MP project will be presented, together with the breakdown analysis into processes, services and tasks that was performed by the consortium.	
11:30	<i>Coffee break</i>	
12:00	Field trials Specific TOSCA-MP software components are available to test by the participants in small groups. See above for a brief description of the components will be presented to you. The trials will continue in the afternoon.	Interactive discussion An interactive discussion is planned in small groups on the scenarios, tasks and services presented during the morning session. The discussions continue in the afternoon.
13:00	<i>Lunch</i>	
14:00	Field trials (cont'd)	Interactive discussion (cont'd)
16:00	Presentation of conclusions & wrap-up	
16:30	<i>End of field trial day</i>
