

**TOSCA-MP**

TOSCA-MP Final Field Trials

Jan. 20-21, 2014, RAI, Turin, Italy

Jan. 23-24, 2014, VRT, Brussels, Belgium

AGENDA

Overview

The final field trials of Tosca-MP will present the possibilities of the technology developed in the project by means of the following four usage scenarios:

- **Content search across multilingual repositories**
Content is made available by lots of different sources - often in languages not understood by the users interested in a topic. Speech recognition and translation technology from TOSCA-MP enables finding content also in other languages than the user's native one.
- **Distributed workflows for media production**
When content is gathered locally either by a journalist or a regional office of a broadcaster, the delay to upload content to central facilities and to process it might deny a timely usage of the content. By using TOSCA-MP's distributed repository and processing infrastructure, metadata extraction results are automatically available for all offices in the network.
- **Rich annotations for archived assets**
Annotating content for later search is still a tedious and time consuming task. TOSCA-MP provides tools for automatic generation of metadata and efficient applications for review and correction of those information. As a result, metadata ready for use for indexing and search purposes could be efficiently produced.
- **Assisted production of sports events**
Assembling summaries with highlights of sports events is a frequent task for sport journalists. The automatic detection of important events in soccer games developed by TOSCA-MP makes this process highly efficient.

Experts from TOSCA-MP will introduce you to the usage scenarios, tools and applications and are available for indepth discussion. For each of the usage scenarios individual workstations are available and could be tried in the order you like.

The exact schedule and logistic information can be found in the following pages.

Final Field Trials at RAI – Jan. 20 & 21, 2014Venue

RAI - Centro Ricerche e Innovazione Tecnologica
 Corso E. Giambone, 68
 10135 Torino
 Italy

TOSCA-MP

Rai

Instructions
